The CREAM configuration for supporting SLURM (EMI-3)

CREAM interacts with the BLAH component which is an abstraction layer providing a unified interface to the underlying LRMS. Starting from the EMI-3 release the set of the supported LRMS has been extended by adding SLURM. This is a simply guide for configuring manually CREAM to enable the support of SLURM:

- install and configure CREAM if the resource BDII is up and running by executing

```
ldapsearch -x -h localhost -p 2170 -b 'GLUE2GroupID=resource,o=glue' objectClass=GLUE2Serv
```
