# Release notes for CREAM 1.13.3

## What's new

This is an update of the CREAM providing some bug fixes. In particular it addresses a problem of jobs stuck in a non terminal status while they finished, that can occur in certain cases (when there are also some problems with the blparser).

This update introduces also the Nagios probe for CREAM

## Installation and configuration

See CREAM sysadmin guide.

Please note that yaim (re)configuration is required after installation/update

## Configuration changes

New yaim variable (`CREAM_CONCURRENCY_LEVEL`) used to set the value `cream_concurrency_level` in cream configuration file. It specifies the maximum number of blah instances that can be used in parallel to interact with the batch system. Default value is 50.

## Known issues

Please refer to the CREAM known issues page:

<http://wiki.italiangrid.org/twiki/bin/view/CREAM/KnownIssues>

Documentation changes ===== Modified section "Tune the number of concurrent BLAH instances" of CREAM sysadmn guide
