

FAQ:

Why does the topic revision not increase when I edit a topic?

Answer:

The same topic revision will be used when you save a topic again within a certain time frame (one hour by default). This is to prevent unnecessary topic revisions when you do several edit cycles in a row. To force a new revision when saving again within a short time frame, check the "Force new revision" checkbox below the **[Save]** button.

Note that a new revision *is* created if another person edits the same topic, regardless of the time.

TWiki administrators can modify the time frame with the `{ReplaceIfEditedAgainWithin}` configure setting.
