

---+ Package TWiki::EngineException

Exception used to raise an engine related error. This exception has the following fields:

- `status` - status code to send to client
- `reason` a text string giving the reason for the refusal.

ClassMethod new (`$status`, `$reason` [, `$response`])

- `$status` - status code to send to client
- `$reason` - string reason for failure
- `$response` - custom TWiki::Response object to be sent to client. Optional.

All the above fields are accessible from the object in a catch clause in the usual way e.g. `$e->{status}` and `$e->{reason}`

ObjectMethod stringify () -> `$string`

Generate a summary string. This is mainly for debugging.
