

---+ Package TWiki::Plurals

Handle conversion of plural topic names to singular form.

## **StaticMethod singularForm (\$web, \$pluralForm) -> \$singularForm**

Try to singularise plural topic name.

- \$web - the web the topic must be in
- \$pluralForm - topic name

Returns undef if no singular form exists, otherwise returns the singular form of the topic

I18N - Only apply plural processing if site language is English, or if a built-in English-language web (Main, TWiki or Plugins). Plurals apply to names ending in 's', where topic doesn't exist with plural name.

Note that this is highly language specific, and need to be enabled on a per-installation basis with \$TWiki::cfg{PluralToSingular}.
