

---+ Package TWiki::Store::RcsWrap

This package does not publish any methods. It implements the virtual methods of the TWiki::Store::RcsFile superclass.

Wrapper around the RCS commands required by TWiki. There is one of these object for each file stored under RCS.

ObjectMethod finish ()

Break circular references.

StaticMethod parseRevisionDiff (\$text) -> \@diffArray

Description:	parse the text into an array of diff cells
#Description:	unlike Algorithm::Diff I concatenate lines of the same diffType that are sequential (this might be something that should be left up to the renderer)
Parameter: \$text	currently unified or rcsdiff format
Return: \@diffArray	reference to an array of [diffType, \$right, \$left]
TODO:	move into RcsFile and add indirection in Store
