Preferences settings

TWiki has these levels of preferences settings:

1. System-level settings: TWikiPreferences
 - ◆ Site name, proxy settings, access control, skin
2. Site-level settings: Main.TWikiPreferences
 - ◆ Site admin can overload system level settings
3. Web-level settings: located in each Web, e.g. WebPreferences topic
 - ◆ Web specific access control, navigation links, colors
4. User-level settings: In each user's profile page, e.g. TWikiGuest topic
 - ◆ Settings that are only in effect when this user is logged in, such as LINKTOOLTIPINFO
5. Topic-level settings: Affecting current topic, for web applications

Preferences can be overridden by the next level down unless locked down by a FINALPREFERENCES setting at a higher level.
