

---+ Package TWiki::UI::View

UI delegate for view function

StaticMethod view (\$session)

view command handler. This method is designed to be invoked via the UI::run method.

Generate a complete HTML page that represents the viewed topics. The view is controlled by CGI parameters as follows:

rev	topic revision to view
section	restrict view to a named section
raw	no format body text if set
skin	comma-separated list of skin(s) to use
contenttype	Allows you to specify an alternate content type

StaticMethod viewfile (\$session, \$web, \$topic, \$query)

viewfile command handler. This method is designed to be invoked via the UI::run method. Command handler for viewfile. View a file in the browser. Some parameters are passed in CGI query:

filename	Attachment to view
rev	Revision to view
