Template Web

Purpose

Template webs contain a set of default topics and act as templates when creating a new web. Names of template webs begin with an underscore "_" character, such as `_default`. Names of regular webs begin with an uppercase letter, such as `Main`.

An administrator can select a template web from the "based on web" picklist when creating a new web in the `ManagingWebs` topic. Template webs are otherwise invisible.

The `_default` web template contains the following topics: `WebHome`, `WebAtom`, `WebChanges`, `WebCreateNewTopic`, `WebIndex`, `WebLeftBar`, `WebNotify`, `WebPreferences`, `WebRss`, `WebSearch`, `WebSearchAdvanced`, `WebStatistics`, `WebTopicList` and `WebTopMenu`.

Customizing

The web template is useful for administrators to design for creating webs of a certain type. Departmental webs can at least begin with a similar look and feel.

Simply create a web with an underscore for the first character. These can be used by authorized users to create webs from this template.
