

EDITACTION -- Selects an edit template

- EDITACTION defined in a topic or preference setting will define the use of an editaction template instead of the standard edit. If EDITACTION is defined as `text`, then hide the form. If EDITACTION is defined as `form` hide the normal text area and only edit the form.
 - Syntax: Set EDITACTION = `text|form`
 - Expands to: `%EDITACTION%`
 - Related: TWikiScripts#edit
 -  When EDITACTION is defined as `text` or `form` the Edit and Edit Raw buttons simply add `;action=text` or `;action=form` to the URL for the edit script. If you have defined EDITACTION in a topic setting or preference setting you can still edit the topic content or the form by removing the `;action=form` or `;action=text` from the edit URL in the browser and reload.
