TWiki Web Preferences

The following settings are *web preferences* of the TWiki web. These preferences override the *site-level preferences* in TWiki.TWikiPreferences and Main.TWikiPreferences, and can be overwritten by *user preferences* (your personal topic, such as TWikiGuest in the Main web). These web preferences can be overridden by *topic preferences*, e.g. preferences in individual topics.

Help on Preferences

- A preference setting is defined by:
3 or 6 spaces * Set NAME = value
Example:
 - ◆ Set WEBBGCOLOR = #FFFFC0
- A preferences setting can be disabled with a # sign. Remove the # sign to enable a local customisation. Example:
 - ◆ #Set DENYWEBCHANGE = UnknownUser
- Preferences are used as TWikiVariables by enclosing the name in percent signs. Example:
 - ◆ When you write variable %WEBBGCOLOR% , it gets expanded to #FFD8AA
- The sequential order of the preference settings is significant. Define preferences that use other preferences first, i.e. set WEBCOPYRIGHT before WIKIWEBMASTER since %WEBCOPYRIGHT% uses the %WIKIWEBMASTER% variable.
- You can introduce your own preferences variables and use them in your topics and templates.
